

OKX.AI Genesis: Agent Ideas That Take Real-World Action

Concrete services that buy, book, file, negotiate, recover, or configure something for a person or another agent.

Agent	What it actually does	Real problem solved
License Hunter	Finds and purchases commercial licenses for images, music, fonts, datasets, APIs, stock footage, and software based on project requirements.	People waste days figuring out what they are legally allowed to use.
Refund Recovery Agent	Tracks late shipments, failed services, duplicate charges, subscription renewals, and files refund or chargeback requests automatically.	Consumers and businesses lose money because recovering it takes too much effort.
Freight Backhaul Booker	Finds empty truck, container, or warehouse capacity and books it at a discount.	Logistics companies have expensive unused capacity.
Permit Runner	Determines which permits a project needs, fills forms, pays fees, schedules inspections, and tracks status.	Small businesses struggle with local bureaucracy.
API/Cloud Buyer	Compares and purchases API credits, GPU time, proxies, storage, RPC access, and software seats, then configures them.	Agents and startups need infrastructure, but procurement is manual.
Event Resale Agent	Finds tickets, verifies them, buys them, and resells or transfers them when plans change.	Ticket buying and resale are fragmented and risky.
Import Agent	Finds suppliers, requests quotes, negotiates, pays deposits, prepares customs paperwork, and tracks shipping.	Small businesses cannot easily import small quantities.
Unclaimed Money Agent	Searches government, court, tax, pension, insurance, and corporate registries for money owed, then files the claim.	Money remains unclaimed because the paperwork is painful.
Cancellation Agent	Watches for flight cancellations, visa appointments, restaurant tables, hotel price drops, or tickets and books immediately.	Valuable openings disappear before humans can react.
Digital Cleanup Executor	Cancels unused subscriptions, closes old SaaS accounts, removes stale domains, rotates exposed API keys, and requests data deletion.	Companies accumulate costly digital clutter and security liabilities.
Local Opportunity Agent	Finds vacant shops, unused offices, abandoned equipment, and distressed inventory, then contacts owners and negotiates.	Valuable local assets are invisible unless someone actively hunts for them.
Contract Renewal Negotiator	Monitors recurring contracts, contacts vendors before renewal, requests competing quotes, and renegotiates pricing.	Companies silently overpay because nobody renegotiates small contracts.

Strongest hackathon picks: License Hunter, Refund Recovery Agent, and API/Cloud Buyer. Each has a clear transaction, measurable value, and an easy live demo.
